Quick Note: The burndown chart for CW Sprint 3 (July 7–21, 2025) doesn't follow the ideal guideline because we only migrated most of our stories into Jira around mid-sprint. You'll see the line flat at zero until July 15, then jump to about 7 points and climb to 23 points once we realized the Instagram Scraper was feasible and created those tickets. Finally, we bulk-closed the remaining stories on the last day, which causes the steep drop back to zero.

We adopted a slightly slower sprint velocity. In Sprint 3 our velocity was 23 story points, down from 27 in Sprint 2 and 29 in Sprint 1. That decrease wasn't intentional—it simply reflects having fewer small setup tickets now that our core components and architecture are in place. Because the features we scoped this sprint reused much of our prior work, we completed them more quickly. Going forward, we expect our velocity to settle in the mid-20s, consistent with Sprints 1–3.
